

ECEP - Course syllabus

Online

NOW FOR SIMPLIFIED SOLUTIONS

Module: 1/8

Module name: Linux Systems

- **Objectives:**

- To get familiar with Linux Operating system - Commands, tools and editors
- Equip yourself to use Linux as a development platform for Embedded Systems

- **Overview:**

This kick-start module is intended to get new programmers up and running with Linux embedded environment. Starting with basics of Linux and its features, this module covers the essential commands. By getting to know powerful Linux commands for redirection and pipes, it lays a strong foundation to automate routine tasks.

- **Duration:**

1 Week

- **Platform:**

Linux (Ubuntu)/WSL (Ubuntu)

- **Delivery method:**

Instructor-lead, Hands-on

- **Module topics:**

- *Overview of Linux OS*
- *Getting started with Linux*
- *Command Line Interface*
- *Shell commands, filtering commands*
- *Redirection & pipes*
- *Directory and File system structure*
- *Visual editor(VIM)*

NOW FOR SIMPLIFIED SOLUTIONS

Module: 2/8

Module name: Advanced C

- **Objectives:**

- Clearly understand concepts of C language
- To obtain good quality and style in programming
- Gear you up for programming in Embedded environment
- To induce confidence in you!

- **Overview:**

Lot of books tells about what is programming. Many also tell how to write a program, but very few cover the critical aspect of translating logic into a program. Specifically, in this fast paced industry, when you don't have time to think to program, this course comes really handy. It builds on the basics of programming, smooth sailing through the advanced nitty-gritties of the Advanced C language by translating logic to code. Every class is backed by discussion and topic related assignments. Finally, a project letting you apply most of the concepts learned throughout the module

- **Duration:**

2 months

- **Platform:**

Linux (Ubuntu) / Windows / Mac

- **Delivery method:**

Instructor lead, Specific assignments, and Project

- **Module topics:**

- *Problem solving and Algorithms*
- *Basics of C - Operators, Conditionals, Loops, Arrays, Pointers*
- *Structures, Unions, Functions, Files, Preprocessor directives, Recursion*
- *Standard I/O, Storage classes*
- *Project environment - Creating & Building a project*
- *Deep dive - Logic to program translation, Dry-run*

NOW FOR SIMPLIFIED SOLUTIONS

Module: 3/8

Module name: Data structures and Logic analysis

- **Objectives:**

- Review methods for problem solving and algorithm analysis
- Develop an understanding of Abstract Data Types (ADT) and their implementation
- Understand the importance of information hiding, data abstraction, and modular design
- Recognize programming needs - cost and benefits of each data structure
- Enable you to select the data structure for the job

- **Overview:**

A firm understanding of data structures provides a basis for writing more efficient code. The four hallmarks of good programming are proper design, clear coding, good organization of data, and correct algorithm selection. This course is intended to provide an understanding of data specification and abstraction, how that leads to the specification of data structures, and how data structures are implemented as late as possible, based on the specified structures.

- **Pre-requisites:**

Proficiency in C

- **Duration:**

1 month

- **Platform:**

Linux (Ubuntu) / Windows / Mac

- **Delivery method:**

Instructor lead, Assignments, and Project

- **Module topics:**

- *Introduction to Data Structures & Algorithm Analysis*
- *Makefiles*
- *Coding guidelines and creation of project and libraries*
- *Abstract Data Types (ADT)*
- *Stacks, Queues and Linked Lists*
- *Trees, Recursion*
- *Sorting Algorithms*
- *Hashing*

NOW FOR SIMPLIFIED SOLUTIONS

Module: 4/8

Module name: C++ Programming

- **Objectives:**

- Introduce you to Object Oriented Programming (OOP)
- Understand differences between C and C++ with respect to Embedded Programming
- Hands-on programming with OOP

- **Overview:**

The C++ programming language has emerged as a versatile language with multi-purpose applications. Being one of the early OOP language this language provides some unique advantage by separating data and methods using various data abstraction mechanisms. Designed by keeping Embedded programmers in mind, this module takes a workshop approach towards C++ programming.

- **Duration:**

10 days of class

- **Platform:**

Linux (Ubuntu) / Windows / Mac

- **Delivery method:**

Instructor lead with hands-on programs

- **Module topics:**

- *Introduction to C++ and OOPS*
- *Creation & destruction of objects*
- *Data Members, Member Functions, and this Pointer*
- *Constructor & Destructor*
- *Inheritance, Function overriding and Virtual functions*
- *Polymorphism, Pure virtual functions, and Virtual Base Class*
- *Function and Class Templates*

NOW FOR SIMPLIFIED SOLUTIONS

Module: 5/8

Module name: Basic Electronics

- **Objectives:**

- Understand and apply Ohm's Law and Kirchhoff's Laws.
- Understand the functioning and application of diodes, transistors, and operational amplifiers.
- Become familiar with Fundamentals of semiconductors

- **Overview:**

This course introduces the fundamental concepts of electronics. Topics covered include the basics of electric circuits, semiconductor devices, and applications of electronic circuits.

- **Duration:**

2 Weeks

- **Delivery method:**

Instructor led, Assignments.

- **Module topics:**

- *Basics of passive elements (resistor, inductor, and capacitor), Kirchhoff's voltage and current laws.*
- *series and parallel circuits*
- *Fundamentals of semiconductors, PN junction diode, BJT, FET, Thyristors, Integrated circuits*
- *Linear application - Transistors and Operational amplifiers*
- *oscillators (Op-Amp based).*

NOW FOR SIMPLIFIED SOLUTIONS

Module: 6/8

Module name: Micro controllers

- **Objectives:**

- Enable you to read and understand datasheets and hardware manuals
- Setup, develop and download Embedded applications into a target hardware
- To provide a basic idea of hardware/electronics aspects of programming
- Enable you to program any micro controller
- To get you started with basic Embedded application development with ease

- **Overview:**

A complete module deals with writing an Embedded C program for Hardware with any micro-controller on it. This module gives you first-hand experience of running your program on target hardware, thereby giving you the “Embedded” feel. With PIC platform you will learn how to write optimized Embedded programs.

- **Duration:**

1+ month

- **Platform:**

- Onsite classes: [Rhydolabz PIC Board](#)
- Online classes: [PICSimLab - PIC Simulator Laboratory](#)

- **Delivery method:**

Instructor led, Assignments and Mini Project

- **Module topics:**

- *Introduction to embedded systems*
- *Microprocessors vs. Microcontrollers with intense hardware focus*
- *Hands-on working with GPIOs, Analog I/Os, Memory usage, interfacing etc.*
- *Micro controller peripherals usage - Timers, Counters, Interrupts, and its sources*
- *Communication protocols - CAN, UART, SPI, I2C etc*

NOW FOR SIMPLIFIED SOLUTIONS

Module: 7/8

Module name: Linux Internals & Networking

- **Objectives:**

- To gain strong knowledge of OS programming
- Proficiency on the Linux API's and system calls
- To get the knowledge of high performance and secure coding by using OS capabilities
- Enable you to write Network protocols using Sockets

- **Overview:**

Currently most of the embedded systems are built over an operating system due to performance requirements and the resource complexity. This adds responsibility to developers to understand the make use of the operating system capabilities to build a secure, high performance and crash free system. This course gives complete understanding of the Operating system concepts and Linux internals (Interfaces, API's and system calls). This module helps the audience to move to the next level of programming by considering other factors in the system. This module is industrial aligned and provides ample practical classes to provide good exposure to Linux programming.

- **Pre-requisites:**

Proficiency in C programming, Fundamentals of Operating system

- **Duration:**

1+ month

- **Platform:**

Linux (Ubuntu)

- **Delivery method:**

Instructor lead, Assignments, and project

- **Module topics:**

- *OS Basics - Components of Linux*
- *Systems calls, Process*
- *POSIX Threads - Multi threaded programming, P-thread API's*
- *Synchronization - Race condition & mutex, Semaphores*
- *IPC - Signals, Pipes, FIFO, shared memory, System V-semaphores*
- *Sockets - TCP and UDP sockets, Client-server programming using sockets*

NOW FOR SIMPLIFIED SOLUTIONS

Module: 8/8

Module name: Embedded Linux on ARM

- **Objectives:**

- Get you exposed with various trends in Embedded OS
- Making appropriate Open source choices for your Embedded device
- Get hands-on with Flash memory usage, EEPROMS using development boards
- Equip you with high end application Embedded development with ARM

- **Overview:**

A unique module combining various previous modules you have learnt by combing Linux administration, Hardware knowledge, Linux as OS, C/Computer programming areas. This is a complete module on Embedded OS, as of now no books are written on this with such practical aspects. Every class is backed by discussion and topic related assignments, demo by instructor and practice by you. Finally, a project letting you apply most of the concepts learned throughout the module

- **Duration:**

Self-learning (Recorded Videos)

- **Platform:**

- Onsite classes: [BeagleBone Black \(ARM Cortex A8\)](#)
- Online classes: [QEMU Emulator](#)

- **Delivery method:**

Instructor lead, Assignments, and mini project

- **Module topics:**

- *Embedded Development and Environment*
- *Toolchain: Configuration and Cross-compilation*
- *Target Overview and Boot loading*
- *Embedded Linux Kernel, Root File Systems*
- *U-boot setup, compilation & booting*
- *Kernel configuration, compilation & booting*
